

WHITE LICK BEEKEEPERS ASSOCIATION  
Honey Extractor Rental Agreement

**The Extracting Equipment is described as follows and is rented as a single unit.**

- One (1) Maxant Model 3100-P 9/3 frame Honey Extractor, with set of legs (1)
- One (1) variable speed Electric Motor
- Capping knife (1), tub (1), scrapper (1), sieve (1), and 5-gallon bucket (1).

**WLBA is not responsible for any injury resulting from use of the equipment. Before using the extractor review written instructions and get answers to questions before proceeding.**

**WLBA Honey Extractor Rental Terms**

- Extractor is available to only active members of the WLBA. (Refer to Bylaws, Article III, Section 4.)
- To reserve the extractor or if you have questions, please call Gail Green at 317-213-9826 (call or text).
- If the extractor is shared with other members, the member (Renter) who signs this Agreement is responsible for adhering to rental terms.
- Extractor rental is for a maximum of three (3) days (72 hrs.) from time of pickup.
- Renter will be responsible for any damaged equipment or missing parts.
- \$25 cash deposit is required for rental, itemized as follows:
  - \$5 (non-refundable) for purchase of additional honey processing equipment.
  - \$20 (refundable) for the timely return of properly cleaned equipment.

**Extractor Cleaning Protocol**

To clean the extractor, rinse out honey and wax using hot water and liquid soap such as Dawn. Spray with a bleach solution of 1 cup bleach in one gallon of cold water. Let soak for five minutes and rinse thoroughly with tap water. Wipe clean with a lint-free towel. Bottom line == the extractor must be clean. Failure to return a clean extractor is not acceptable.

## HONEY PROCESSING EQUIPMENT

## Model 31 DOP 9 Frame Power Extractor

Congratulations on purchasing the best hobbyist extractor on the market. We are confident that you will find a lifetime of enjoyment from our products. Our company was founded on the idea of equipment that lasts a lifetime. With minimum care, this machine will last a lifetime.

Your extractor is ready to use straight out of the box. We recommend running warm soapy water through it before its first use. If you ordered a log kit, assemble and bolt to the extractor. Your extractor is operated by a Parvillux gear motor and speed control. We strongly recommend this motor for 2 years after purchase.

Your extractor is designed to hold 3/619 frames. You have the ability to extract 6 medium and/or shallow frames radially, and 3 medium/

BEFORE EXTRACTING MAKE SURE YOUR HONEY GATE IS OPEN. YOU WILL DAMAGE THE MOTOR IF GATE IS CLOSED DURING EXTRACTING.

When loading frames, you MUST use the speed control to advance the basket. Manually forcing basket will strip out the gear box, and void any warranty. Once you have loaded your frames, start the speed control in VAR mode. Slowly turn the clockwise spinning slowly. Repeat your 1/2 times if your machine is spinning soft. After 3, 1/2 minutes you may gradually increase the speed.

Should you choose to use the basket, be careful not to lose the 1/2 stainless steel ball bearing that sits in the cup inside the conical bottom of the extractor. Pack a food grade grease in the ball bearing cup.

Once your honey flow has started you may flip the switch to full speed to cool the motor. We recommend a maximum full speed time of 8 minutes after initial start up. If you extract 9-6 frames radially, they will not need to be flipped, nor do you need to reverse the direction of spinning. Radially extracting will do both sides at once. If you choose to load 3 frames tangentially, they will need to be flipped, and the process repeated. When you are finished extracting, you may rinse out the extractor with hot water. You may tie a bag around the motor to keep water out.
